Abstract

The text of the abstract begins here. The text of the abstract begins here. The text of the abstract begins here.

The above title line (Abstract) is styled using `\large` and `\textbf`. Paragraph text is styled using the default style. Pages should be assigned from the abstract using small Roman numerals (i, ii, iii, iv, v, etc.)

Keywords: Keyword, Keyword, Keyword, Keyword, Keyword, Keyword

국문 제목

홍길동

OO학과

지도교수: 김철수

국문 초록

영어 논문의 경우에도 한글 초록이 작성되어야 합니다. The Korean abstract should follow the English abstract.

In addition, a thesis/dissertation written in a foreign language other than English must include the abstract in the relevant foreign language, English and Korean.

중심어 : 중심어, 중심어, 중심어, 중심어, 중심어, 중심어

You can dedicate your thesis/dissertation
to someone you know either personally or professionally.

It is customary to place the dedication text
in the center of the page without a title heading.

If you do not need this page, delete it.

Preface

The text of the preface begins here.

If the thesis/dissertation contains the results of work conducted in collaboration with other people, or if the thesis/dissertation contains previously published content, a preface must be included. The preface may include the following. However, it is also possible to include the contents of the preface in the introduction of the main body.

1. a description of the results that were obtained in collaboration with others, indicating the nature and proportion of the contribution of others and in general terms the portions of the work which the student claims as original
2. acknowledgments of funding sources and other contributors
3. a description of contents that have been published or submitted for publication and the contributions of all authors involved in any multi-authored publications included in the thesis/dissertation
4. your brief personal background, academic motivation, thesis/dissertation target group, acknowledgments, etc. can be included

Examples you may refer to

- https://www.grad.ubc.ca/sites/default/files/doc/page/thesis_sample_prefaces.pdf
- <https://www.phase-trans.msm.cam.ac.uk/2002/thomas/chapter1.pdf>

Acknowledgment

The text of the acknowledgments begins here. If necessary, acknowledgments can be included. If the acknowledgments are mentioned in the preface, this section may be omitted.

Table of Contents

Abstract	i
국문초록	ii
Preface	iv
Acknowledgment	vi
Table of Contents	vi
List of Tables	ix
List of Figures	x
Nomenclature	xi
1 Introduction	1
1.1 Second Level Heading	1
1.1.1 Third Level Heading	1
1.2 Referencing Headings	2

2	Format	3
2.1	Paper Size and Margins	3
2.2	Fonts and Size	5
2.3	Tables and Figures	6
2.4	Equations	8
2.5	Footnotes and Endnotes	10
2.6	Quotation	10
2.7	Definitions and Theorems	11
3	Conclusion	13
	Reference	14
	Appendix	15
A	The first appendix	15
B	The second appendix	16
	Index	17

The table of contents starts with the abstract. The preliminary pages (abstract, dedication, preface, acknowledgments, table of contents, list of tables, list of figures, nomenclature) should be assigned using small Roman numerals (i, ii, iii, iv, v...). The other preliminary pages (cover page, title page, and signature page) should not be numbered. For the main body, use Arabic numbers (1, 2, 3, 4, 5...) starting with page 1. It is customary to use Arabic numbers (1, 2, 3, 4, 5...) for the chapters in the main body and capital letters (A, B, C...) for the sections in the appendices.

List of Tables

2.1 Organizing and formatting thesis/dissertation 4

2.2 Requirement for font size and the style used in the L^AT_EXtemplate Re-
quirement for font size and the style used in the L^AT_EXtemplate 5

A list of tables shall be included when there are tables in the thesis/dissertation. Table numbering can be continuous throughout the thesis/dissertation or by chapter (e.g., 1.1, 1.2, 2.1, 2.2...).

List of Figures

2.1	Korea University Global Symbol	7
A.1	Korea University Graduate School Korea University Graduate School Korea University Graduate School	15

List of figures should be prepared when figures are included in the thesis/dissertation. Figure numbering can be continuous throughout the thesis/dissertation or by chapter (e.g., 1.1, 1.2, 2.1, 2.2...).

Nomenclature

M	original mass matrix
K	original stiffness matrix

Subscripts

b	interface boundary
d	dominant

Abbreviation

CMS	Component Mode Synthesis
-------	--------------------------

If nomenclature or a list of symbols is used, a section describing subscripts and abbreviations can be included.

Chapter 1. Introduction

The following formatting information is intended to illustrate several acceptable ways of preparing a thesis or dissertation for your convenience.

Chapter 1 is styled with `\chapter{Introduction}`.

You can put `\label{chap:intro}` to refer to this chapter.

1.1 Second Level Heading

Section 1.1 is styled with `\section{Second Level Heading}`.

You can put `\label{sec:section}` and `\ref{sec:section}` to label and refer to this section. Sections will appear in the Table of Contents, automatically.

1.1.1 Third Level Heading

Subsection 1.1.1 is styled with `\subsection{Third Level Heading}`. Subsections will appear in the Table of Contents, automatically.

For more information about headings, refer to https://www.overleaf.com/learn/latex/Headers_and_footers

This template isn't the only way to list titles, subheadings, numbering, etc. It's just one example that may work for you and it is not mandatory or even recommended.

1.2 Referencing Headings

Suppose that you want to refer to the first section. The first section (of the first chapter) was labeled with `\label{sec:section}`. You can refer to the section by typing `\ref{sec:section}`: Section 1.1

Suppose that you want to refer to the first subsection. The first subsection (of the first section of the first chapter) was labeled with `\label{subs:subsection}`. You can refer to the subsection by typing `\ref{subs:subsection}`: Subsection 1.1.1

For more information about labeling and referencing, refer to the followings.

- https://en.wikibooks.org/wiki/LaTeX/Labels_and_Cross-referencing
- https://www.overleaf.com/learn/latex/Cross_referencing_sections%2C_equations_and_floats

Chapter 2. Format

2.1 Paper Size and Margins

The paper size of the thesis/dissertation shall be B5. For the first three preliminary pages (including the cover page, title page, and signature page) before the abstract, all margins (top, bottom, left, and right) shall be at least 3 cm. From the abstract on, the top and bottom margins shall be at least 3cm, and the left and right margins shall be at least 2 cm (Table 2.1).

The paper size and margins are governed by the geometry package. For more information, refer to the following

- <http://mirrors.ctan.org/macros/latex/contrib/geometry/geometry.pdf>
- https://www.overleaf.com/learn/latex/Page_size_and_margins

Table 2.1: Organizing and formatting thesis/dissertation

Order	Note	Margin	Pagination
Cover page		top, bottom, left & right at least 3 cm	None
Title page			
Signature page			
Abstract	both English & Korean		
Dedication page	optional		
Preface	if necessary		
Acknowledgements	optional	top & bottom at least 3cm	i, ii, iii, iv, ...
Table of contents			
List of tables	if there are tables or figures in the main body	left & right at least 2 cm	
List of figures			
Nomenclature	optional		
Main body			
Reference			
Appendices	optional		1, 2, 3, 4, ...
Index	optional		

Table 2.2: Requirement for font size and the style used in the \LaTeX template Requirement for font size and the style used in the \LaTeX template

	Size requirements	\LaTeX command	\LaTeX size
Thesis title	21	<code>\huge</code>	20.74
The school name (Graduate School, Korea University)	18	<code>\LARGE</code>	17.28
All other parts are 16 points (department, name, advisor, master's thesis, ..., submitted, ... completed, etc.)	16	<code>\fontsize{16pt}{16pt}\selectfont</code>	16
Year, month and day	14	<code>\Large</code>	14.4
Main Text	10–12	<code>\normalsize</code>	10.95
Heading	None		
Figure caption	None		
Table caption	None		

2.2 Fonts and Size

The default font size is set to 11pt. In \LaTeX , you can use commands like `\normalsize`, `\Large`, `\LARGE`, `\huge`, and so on, to specify the size of the font. We relate the above commands to 11pt, 14pt, 18pt and 21pt, respectively, of the MS word template. In addition, the following command was used to express 16pt.

```
\fontsize{size}{baselineskip}\selectfont
```

Thus, there are slight differences in font size in MS word template and in \LaTeX template (Table 2.2).

2.3 Tables and Figures

The font, size, alignment method, numbering method, etc. of table or figure titles can be modified, appropriately. For example, `\Table 1` and `\Figure 1` can also be used. Also, the style of the table (thickness and color of the border, etc.) can be modified. It is common to place figure titles below the figure and table titles above the table.

To make a table, use the environment `tabular` and specify the columns. The above table has three center-aligned columns ;

```
\begin{tabular}{ccc} ... \end{tabular}
```

You can also use an advanced version of `tabular`, which are `tabularx`, `tabulary`, `tabu`, `multirow` or `booktabs` to manipulate the typeset of tables.

It is desirable to put the `tabular` environment inside the `table` environment. You can add a caption of the table by `\caption{...}`. The labeling `\label{...}` for future reference should be followed just after the caption. All the tables in the `table` environment will be included in the ‘List of Tables’.

For more information about tables, refer to

- <https://www.overleaf.com/learn/latex/Tables>

It is also possible to use \LaTeX tables generator.

- <https://www.tablesgenerator.com/>

To include a figure file in the document, you can use `includegraphics` command, which requires `graphicx` package.

```
\includegraphics[width=.2\textwidth]{kumark.png}
```

You can specify the width or the height of the figure inside the square brackets and the file name (with or without the extension) inside the braces.

It is desirable to put the `includegraphics` command inside the `figure` environment. Again, the labeling needs to be followed just after the caption. All the tables in the `figure` environment will be included in the ‘List of Figures’.

Figure 2.1: Korea University Global Symbol

For more information about figures, refer to the following

- https://www.overleaf.com/learn/latex/Inserting_Images
- [https://www.overleaf.com/learn/latex/How_to_Write_a_Thesis_in_LaTeX_\(Part_3\)%3A_Figures%2C_Subfigures_and_Tables](https://www.overleaf.com/learn/latex/How_to_Write_a_Thesis_in_LaTeX_(Part_3)%3A_Figures%2C_Subfigures_and_Tables)

2.4 Equations

You can type an equation with inline math mode like $E = mc^2$. Or you can type

$$E = mc^2$$

to express the equation in display math mode. The above equation is unnumbered. To number the equation automatically, you can use `equation` environment;

$$E = mc^2 \tag{2.1}$$

The number or the tag of the above equation reads ‘the first equation of the chapter 2’. If you add one more equation, you can get the second equation of the chapter 2.

$$e^{i\theta} = \cos \theta + i \sin \theta. \tag{2.2}$$

You can also specify the tagging explicitly, using `\tag{...}`

$$E = mc^2 \tag{*}$$

To express a list of equations, you can use the `gather` environment, which just enumerates equations vertically. For example, suppose that you want to express a system of linear equations $x + y + z = 3$, $x - y + 2z = 1$, $x + 3z = 2$. Using `gather` environment, you

get

$$x + y + z = 3 \tag{2.3}$$

$$x - y + 2z = 1 \tag{2.4}$$

$$x + 3z = 2. \tag{2.5}$$

If you want to un-number the equations, use `gather*` environment;

$$x + y + z = 3$$

$$x - y + 2z = 1$$

$$x + 3z = 2.$$

Note that the above system is not well aligned. To align the equations horizontally, with respect to the equality sign, you can use `align` (or `align*`) environment

$$x + y + z = 3$$

$$x - y + 2z = 1$$

$$x + 3z = 2.$$

`align` environment tags every equation of the system

$$x + y + z = 3 \tag{2.6}$$

$$x - y + 2z = 1 \tag{2.7}$$

$$x + 3z = 2. \tag{2.8}$$

If you want one tagging for the system, you can use the `aligned` environment and the `equation` environment, simultaneously ;

$$\begin{aligned}x + y + z &= 3 \\x - y + 2z &= 1 \\x + 3z &= 2.\end{aligned}\tag{2.9}$$

Finally, you can label and refer to an equation, by `\label{...}` and `\eqref{...}`. For example, you can say that ‘The root of (2.9) is $x = 2, y = 1, z = 0$ ’. `gather` and `align` are the environments provided by the `amsmath` package. For more information to typeset the equation neatly, refer to <http://www.ams.org/arc/tex/amsmath/amslldoc.pdf>.

2.5 Footnotes and Endnotes

Footnotes¹ can be included to provide additional information about the content. Footnotes should be placed at the bottom of the page separated from the text by a solid line and referenced through a superscript number.

2.6 Quotation

If you want to cite from the bibliography, you can type, for example, `\cite{LSTM}` where LSTM is the name of the reference: [1]. Or you can cite the other reference here like this; [2].

For direct quotation, you can use either the `quote` environment or the `quotation` environment.

¹The usage of footnotes is different or limited depending on the field of study. The usage of footnotes is recommended only when you’re sure how a footnote should be used in your field.

“Learn from yesterday, live for today, hope for tomorrow. The important thing is not to stop questioning.”

— Albert Einstein

“Learn from yesterday, live for today, hope for tomorrow. The important thing is not to stop questioning.”

— Albert Einstein

2.7 Definitions and Theorems

If you want to make definitions and theorems in the paper, use the predefined (in the preamble) environments `definition` and `theorem` which are supported by the `amsthm` package.

You can either specify the name of the definition

Definition 1 (Right Triangles). *A right triangle is a triangle in which one angle is a right angle.*

or not (don’t specify the name of the definition)

Definition 2. *A right triangle is a triangle in which one angle is a right angle.*

Here are examples of theorems ;

Theorem 1 (Pythagorean theorem). *Consider a right triangle where c is the length of the hypotenuse, and a and b are the lengths of the remaining two sides. Then*

$$a^2 + b^2 = c^2 \tag{2.10}$$

Theorem 2. *Consider a right triangle where c is the length of the hypotenuse, and a and b are the lengths of the remaining two sides. Then*

$$a^2 + b^2 = c^2 \tag{2.11}$$

For later use, we put indexings for a right triangle and the Pythagorean theorem here.

Sometimes you need to special font for mathematical use. For example, you may need symbols like \mathbb{R} , \mathcal{T} , \mathcal{A} or \mathfrak{M} . Some symbols are typesetted without declaring any packages, while others need packages like `amssymb` or `mathrsfs`. For more information about typesetting mathematical expressions, refer to the followings ;
